QUALITY ASSURANCE | FINAL REPORT

TEST CLOSURE AND SIGN-OFF REPORT

OPay Android Application - Bank Transfer Feature

Document ID	QA-01-OPY-TCR-001	**Fellow ID**	FE/23/7640933
Tester	Uthman Adewale	**Status**	Final
Application	OPay 8.12.1.474	**Closure date**	17 August 2026
Environment	Samsung Galaxy S21+ / Android 12	**Method**	Manual testing

CLOSURE DECISION: TESTING COMPLETE
All planned tests met their expected results. The test cycle may be closed, with no release-blocking defect identified within the defined scope.

1. Purpose of Closure

This report formally closes the manual test cycle for the OPay Transfer to Bank Account journey. It confirms that the planned scope was executed, the agreed exit criteria were satisfied, the supporting records were completed and the final testing recommendation was documented.

2. Exit Criteria Assessment

Exit criterion	Target	Observed result	Status
All planned test cases executed	38 of 38	38 of 38	**Met**
Expected results achieved	100% pass rate	100% pass rate	**Met**
No failed, blocked or unexecuted cases	0 outstanding	0 outstanding	**Met**
Requirements traced to executed tests	16 of 16	16 of 16	**Met**
Release-blocking defects	0 open	0 identified	**Met**
Evidence mapped to executed cases	38 of 38	38 of 38	**Met**

3. Final Test Results

Planned	**38**	**Executed**	**38**
Passed	**38**	**Failed**	**0**
Blocked	**0**	**Not Run**	**0**
Pass Rate	**100%**	**Defects**	**0**

4. Closure Findings

- **Recipient protection.** The account field enforced numeric entry and the 10-digit limit. Changing the destination bank triggered recipient revalidation and blocked mismatched details.
- **Amount controls.** Amounts below ₦100, above the ₦5,000,000 tier limit or above the available balance did not proceed. Preset and manually entered amounts behaved as expected.
- **Authorization.** Fingerprint completed the controlled ₦100 transfer; the PIN option was available, an incorrect PIN was rejected and authorization could be cancelled safely.
- **Transaction integrity.** Recipient, bank, amount and fee remained consistent through review and completion. The successful transfer appeared once in History with no unintended duplicate.
- **Recovery behaviour.** The app preserved an unsubmitted transaction after minimization, failed safely without connectivity and recovered after network service was restored.

5. Residual Risk and Limitations

No defect remained open at closure. Residual risk is limited to combinations outside the approved scope, including other devices, operating-system versions, destination banks, account tiers, higher-value authorized transfers, and untested performance or security conditions. The result applies only to OPay version 8.12.1.474 under the recorded conditions; it is not a production-wide certification.

6. Closure Package

Record	Closure evidence
Planning	Approved OPay bank-transfer test plan
Execution	Executed test cases and Test Execution Summary Report
Control	Bug Report, Requirements Traceability Matrix and Test Evidence Log

7. Final Recommendation

Recommendation: Close the test cycle and accept the tested bank-transfer journey within the defined QA scope. All exit criteria were met, no release-blocking issue was identified and no additional corrective test cycle is required for the evidence reviewed.

8. Sign-off

Role	Name	Closure decision	Signature	Date
Tester	Uthman Adewale	Recommend closure	_____	_____
Approver (optional)	_____	Approve / Conditional / Reject	_____	_____
